GETTING MORE HOT WATER

Determine your ground water temperature from this map. This is the supply water temperature to your water heater.

Then, using the table below, determine the potential increased capacity of hot water by incorporating a TankMixer™ on your water heater.

For example, in Atlanta, GA, setting the water heater to 160°F, increases capacity by 69%. This equates to 84 gallons for a 50 gallon heater.

The TankMixer works great to extend the capacity of your existing or new water heater.
